## 7. Description

Condition		Check One	Check One
excellent _x good fair	deteriorated ruins unexposed	unaltered X altered	X original sitemoved: date of move:

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of thirteen two-bay-wide, two-story brick houses with low-pitched gable roofs are typical of the small alley houses built in Baltimore in the 1850s, often along especially narrow secondary alley streets running perpendicularly off the main "alley" street. In many cases, alley houses such as these are still occupied by working class families and many are still covered with the formstone put on in the 1950s or 1960s.

The houses are two stories in height, 12' wide (11'3" wide for the four houses at the south end of the row) and occupy lots 60' deep. Each two-room-deep house has a one-story brick rear kitchen addition somewhat narrower than the house. The pitch of the gable roof is especially low, a characteristic of this particular type of two-story, gable-roofed alley house. The houses are probably constructed in common bond, but all of the facades are now covered with formstone. Originally each house had a simple brick corbelled cornice, but all are now obscured by the formstone. 629 S. Port St. has had a sheet metal, Renaissance-Revival style cornice added above its formstone covering. Chimneys are located at the rear end of the kitchen addition.

The original door and window openings have been completely obscured by the formstone coverings and all windows are filled with replacement 1/1 sash. On several houses the original first floor windows have been replaced by the more fashionable wider plate glass window with stained glass transom popular in the early 20<sup>th</sup> century. No original doors survive and the row shows a mix of replacement door styles, all surmounted by a double-light transom. The houses sit on low basements, lit by a single-light sash. The entrances are reached by two, three, or four brick or concrete steps, depending on the incline of the street.

The houses are basically two rooms deep, with the front room being entered directly from the front door. The front and back rooms of the first floor are separated by a wide opening, with the tightly winding, narrow stairs set in the rear room, in the space between the partition wall and the fireplace. The one-story rear addition served as the kitchen, with its own cooking fireplace.

Prepare both a summary paragraph of significance and a general statement of history and support.

These houses are significant as being representative of a surviving group of extremely modest two-story, gable-roofed houses built in Fells Point in the 1850s and 1860s to serve as inexpensive housing for the influx of newly arrived immigrant families seeking work in harbor-related activities or in the first small factories being built at this time. Most of these houses were located along narrow alley streets, or along even narrower courts. In terms of design, the houses are basically the descendants of earlier Federal-style working class housing built in the early decades of the century, but without the usual dormer story of such houses. Because there is no dormer story the roof slope is much less steep in these later versions of the style. The houses are surprisingly large for the type, with a main house consisting of two small rooms on each floor, with a centrally located, tightly winding, narrow staircase, and a rear kitchen addition.

The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 to \$1,500; small street houses for \$700 - \$900. In this case the builder was responsible for these old-fashioned houses on the west side of Port St. and also for the more stylish early Italianate-style houses on the north side of Fleet St.

The land originally belonged to the Patterson family as part of their 18<sup>th</sup> century estate, which also included the land given by the family to the city for Patterson Park. In the late 1860s the Patterson heirs began developing this block by leasing parcels to various builders who constructed modestly scaled and priced housing for the mainly German immigrant families who were settling near the port-related fledgling industries of Canton. Most of the houses, including these three, sold to mainly German-American semi-skilled tradesmen and laborers employed in nearby factories, who received mortgages from a variety of local building and loans, many of them sponsored by the German community.
